

Circularity

 Nordic Council of Ministers'
Office in Latvia

Nordic-Baltic Energy and Climate Challenge

Mobility and Circularity

18th October 2018,

ALTUM Conference Hall
(Dome Square 4, Riga, Latvia)

Mobility

Circular economy and smart mobility are increasingly popular concepts which also feature in the new EU economic models, as they can offer a better framework for environmentally friendly economic activities.

Nordic and Baltic cities are comparatively modest in size, but they seem to be offering exactly the kind of balance between nature and urbanity that the interconnected modern world needs. For the average-sized cities to become attractive for modern living, they must constantly change. Cities that generate waste and CO₂ emissions will stay in the past – replaced by future cities that are willing to make their own contribution to solving the challenges of climate change and environmental pollution.

The conference aims to contextualise Baltic and Nordic cities in a regional framework, highlighting the ongoing changes in urban development due to the EU regulations as well as the latest technical solutions. The target audience is primarily municipal and national policy-makers and the private sector – i.e., visionaries and developers of the future cities.

On 19th October, the second day of the conference, the International Exhibition of Energy Efficiency and Environmental Technologies *Environment & Energy 2018* is open for attendance. The exhibition opening will be followed by cluster presentations and B2B networking.

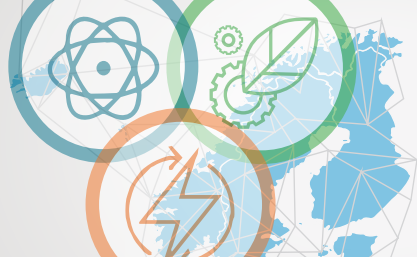

Moderator: Edijs Bošs, journalist and lecturer
